

SmartKidz MVP – Complete Architecture & Execution Blueprint

1. Platform Overview

SmartKidz is a multi-tenant preschool management SaaS platform designed for Indian preschools (~200 students). Core goals of MVP: - Track Admissions - Manage Students - Handle 3-installment fee structure - Manual payment entry (Cash / Online) - Revenue visibility (Expected vs Collected vs Pending) - Basic Attendance - AI draft generation (no automation)

2. Role & Authority Matrix (RACI)

Super Admin: - Create preschool (tenant) - Activate/Deactivate preschool - Create Preschool Admin
Preschool Admin: - Setup classes and fee plans - Manage inquiries & admissions - Assign fee plans - Enter payments - View revenue dashboard - Generate AI drafts
Teacher: - Mark attendance - View class students

3. End-to-End Workflow (Inquiry to Revenue)

Step 1: Add Inquiry Step 2: Follow-up tracking Step 3: Convert to Admission Step 4: Assign Fee Plan (3 installments auto-generated) Step 5: Enter payment manually Step 6: Installment status updates (Pending / Partial / Paid / Overdue) Step 7: Revenue dashboard reflects totals dynamically

4. Screen List by Role

Super Admin Screens: - Login - Tenant Creation - Tenant List
Preschool Admin Screens: - Setup Wizard - Class Management - Fee Plan Management - Inquiry List & Form - Student List & Profile - Assign Fee Plan - Installment View - Payment Entry - Revenue Dashboard - Overdue List - AI Draft
Teacher Screens: - Attendance Marking - Attendance Summary

5. User Story – Tenant Creation Screen

Title: Create New Preschool Account
Pre-requisite: - Super Admin logged in - JWT valid
Description: Super Admin creates a new preschool tenant and linked admin user.
Acceptance Criteria: - Mandatory field validation - Unique email check - Tenant + Admin user created successfully
Validation Messages: - 'Email is required.' - 'Invalid email format.' - 'This email is already registered.'
Confirmation Message: 'Preschool account created successfully.'

6. Security & Architecture Principles

- Multi-tenant isolation using TenantId in all tables - JWT-based authentication - Role-based access control - No cross-tenant data access - No payment gateway in MVP - No automation (AI drafts only)
